You have to learn how to use Photoshop's basic tools before you can advance beyond the most basic image editing and more complex features. As with many other software programs, it's possible to skip through the steps that get you familiar with its tools and start using the more sophisticated features sooner than if you spent endless hours learning from scratch how to use Photoshop's tools. See the latest version of Photoshop at www.adobe.com/products/photoshop. Taking a look at Photoshop's interface The way you work with Photoshop depends on what you want to do. You can use it to create original images, or use it to alter and manipulate images you have already created. The following sections outline how the interface works. Opening a file The first thing you do when you open a file is specify the type of file. Files can be one of several different types, such as a JPG, TIFF, or PDF. At the top of the screen is a file selector that shows you the file types that are available to you. After you select the type of file you want to work with, you can select it from the Open dialog box. If you open any other type of file, Photoshop shows you the file in the Open dialog box (see Figure 3-1). After you navigate through the files, the Preview pane opens, showing you a zoomed-out view of your image. You can also access the Open dialog box by pressing Ctrl+O (⌘-O on the Mac) and select a file from your computer's hard drive. You can also access the Open dialog box by right-clicking any image and selecting Open. But, it's good to know what type of file you're working with. For example, when you want to print your image or send it to someone, you'll know that you can't easily print or email color images. Selecting and arranging layers When you work with layers, Photoshop allows you to organize and edit the layers independently. When you edit a layer, you can see the other layers around it remain the same, or, you can see all the layers separate. Layers allow you to work on the image in a more flexible manner. You may want to see all the layers in a file when you're creating your final image. With this in mind, click the Arrange Layers button (shown in the margin) on the Layers panel to bring them together.

Prospective studies of pediatric sleep disorders at the time of onset of migraine headaches in primary care: the pediatric migraine cohort in the Department of Neurology, Mayo Clinic. Sleep problems are prevalent in children with migraine, but there are no prospective studies at the time of migraine onset. We sought to examine the prevalence of sleep disturbance at the time of migraine onset. Thirty-seven children and adolescents with migraine according to International Classification of Headache Disorders criteria were prospectively studied. Sleep disturbance was assessed with a sleep problem inventory and by parent- and child-rated sleep questionnaires at the time of migraine onset. Among children who had a migraine attack, 65.2% had poor sleep quality (as rated by parents) and 72.2% had sleep disturbance (as rated by parents) at the time of migraine onset. Children with a sleep disturbance episode lasting more than 6 months had a higher frequency of migraine headaches (88.6% vs 53.8% vs 28.6%; $p = .001$). Children with migraine with aura had more sleep problem episodes and a longer duration of sleep problem episodes (median, 7.5 and 6.5 years, respectively; $p = .043$). Children with migraine with aura and children without headache had significantly more sleep problem episodes (median, 2.5 and 2.0 years, respectively; p WASHINGTON — President Obama and David Cameron visited a heavily defended area of Ukraine in a failed attempt to broker peace. The proposed Ukraine peace plan was hatched after the president told Mr. Cameron in a press conference at the G20 Summit in St. Petersburg last week that the two countries should “talk about” how to resolve the separatist crisis in Ukraine. During the conference, Mr. Obama told reporters that he told the PM: “I say to the Prime Minister, it’s got to be a peace agreement, or it’s not going to be there.” That was followed by the surprise visit to eastern Ukraine, with the Obama team apparently planning to travel even if it was not approved by the Kremlin. Russia has been engaged in a diplomatic battle with the West over its plan to annex Crimea. The annexation plan was brought to a vote in the Russian parliament on Sunday after being passed by a majority in a confidence vote in the lower house of parliament, according to the RIA news agency.

Q: Issue in displaying google map view in android I am displaying google map view in my application. But when I am rotating my device the google map view layout is not adjusting to change in device orientation. In my application I have used default activity, I have given hint that activity should automatically rotate on screen rotation. Below are my code snippet where I am initialising the map: //Creates an instance of the Maps class MapView mapView = (MapView) findViewById(R.id.mapview); // Create a factory to construct a Google Map MapFragment mapFragment = (MapFragment) getFragmentManager().findFragmentById(R.id.map); mapFragment.getMapAsync(this); // Gets the MapView from the XML layout and creates a MapFragment to show it mapView.setMap(mapFragment); I have checked the size of different class(MapFragment, MapView, GoogleMap, GpsStatusBar) in eclipse when I ran application in emulator. I saw size of all these classes are growing/shrinking when I am rotating my device. My device has 2 GB RAM. Is it because of 2 GB RAM? Note: I used GoogleMap and gps status bar to support different orientation of device. My Activity xml is given as below:
